

Go Box!

Use migration-center for state-of-the-art content migration to the cloud

With more than 44 million users worldwide, Box's cloud collaborating solution is used by businesses in a variety of ways, including as a file server replacement, FTP replacement and an internal and external collaboration platform. Companies from diverse industries use Box, from leaders in education, technology, and consulting, to advertising, construction, health care, insurance and more. migration-center can help these companies to restructure and migrate the enterprise content easily, safely and cost-effectively to the Box cloud.

High speed internet connections are available in many parts of the world, but migrations of mass data from an existing ECM application to the cloud or to other datacenters through the internet by using web services remain challenging. In many cases, clients are planning to decommission or migrate large ECM applications or file shares from their existing datacenters to another location. In such a situation, business operations need to be supported without any limitations. Temporarily upgrading the last-generation networking gear and boosting connection speeds makes little or no sense. For those use cases migration-center is the missing link and perfectly supports the processes.

Your Benefits

- Use multiple importers at the same time to scale your migration
- Avoid system downtime with successive delta migrations
- Save 60 % in costs and 80 % in project duration when using migration-center, compared to developing your own scripts and frameworks
- No downtime! It works without interrupting any of your normal business operations
- Easy to use, no programming or scripting needed
- Efficient metadata transformation through extensible algorithms
- Customization is easy and fast in case of special customer requirements
- Increase user acceptance by launching new system with existing files and data

Of course we offer further service in terms of analysis and planning, project management or product training. We will also support you with the implementation and deliver maintenance and support after the initial project phase.

How does migration-center do the trick?

With migration-center it is possible to scan an entire file share (as an example) and then exclude all documents you do not want to transfer to the Box cloud (e. g. duplicates, legacy documents or log files). With the transformation rules, any target metadata set can be achieved and from there, it is an automated process to upload all documents including version in the background into the Box cloud. You can easily re-use all configurations and use the same transformation rules to add additional file shares or other source repositories to the Box environment.

Free Evaluation Copy Available

The migration-center Free Evaluation Copy is a trial version of our leading content migration software and grants all functionalities of the full version, just limited by a 14-day time period.

Choose one or more out of 140+ migration paths supporting all kinds of source and target systems, 100 % out-of-the-box, fully documented, easy to deploy and without any additional programming or scripting. Content migration to Box has never been that easy!

Supported Source Systems

- Alfresco
- DXC FirstDoc
- File Share
- IBM FileNet
- IBM Notes / Domino
- Microsoft Outlook
- Microsoft SharePoint
- OpenText Content Server
- OpenText Documentum (D2, DCM, xCP)
- OpenText eDOCS
- OpenText eRoom
- SQL Database
- XML / Excel / CSV
- Custom Systems

Supported Capabilities

Document Capabilities:

- Import any content/files types
- Create new filenames based on transformation rules
- Set document permissions
- Versions
- Import custom metadata
- Set shared links
- Import tags
- Import comments

Folder Capabilities:

- Automatic and rule-based folder creation
- Import source folder structure
- Add collaborators to a folder (permissions)

Customer Voice

»The migration tool fully met our expectations. It has proven a highly powerful transfer platform that allows us to reliably migrate documents from a vast range of source systems. Thanks to this, we stayed on budget.«

Jean-Claude Olivier – Manager at CTIE

Migration Capabilities:

- Advanced Metadata transformation
- Source system analysis capabilities
- Duplicate detection
- Successive delta or incremental migration
- Scheduled and fully automated migration
- No volume restrictions
- Scalability and parallel processing
- Synchronisation
- Offline simulation

Supported Versions

- Box API 2.22
