

Migrate to Generis CARA!

Master your next CARA migration challenge

Generis CARA is an enterprise cloud workspace specifically designed for regulated areas like the life sciences or financial services industry. The intelligent content services platform offers seamless enterprise connections to streamline processes, reduce costs, increase efficiency, and is being used by more than 500,000 experts worldwide.

Challenges of content migration projects

A migration to Generis CARA can take on very different facets - depending on the use case. Be it consolidation after mergers & acquisitions, the move from on-premises legacy systems to the cloud, decommissioning projects, or the fundamental restructuring of existing systems and data (e. g. data cleansing and enrichment).

In particular, heavily regulated industries such as the life sciences sector face a major challenge as compliance plays a predominant role in addition to the usual pitfalls such as system downtimes, susceptibility to errors when carrying out the migration, or high costs.

Advantages of migration-center

Since regulated industries have very individual requirements for the processing of data, classic ETL tools only fulfill a fraction of these conditions and usually do not meet the legal or industry-specific compliance guidelines. Although individual implementations solve this problem, they have to be developed from scratch and are therefore time-consuming and cost-intensive. They are also more prone to errors – a no-go in a validated environment.

migration-center, on the other hand, has been developed specifically for such use cases. In addition to years of experience in content migration, a scalable architecture for high data throughput, the possibility of delta migration to avoid downtime and a sophisticated metadata transformation, migration-center also offers an audit-proof migration process, best suited for regulated industries.

Capabilities of migration-center

- **Supports both CARA for OpenText Documentum to new CARA (cloud-based)**
- **Import documents, content-less objects, structures, and audit trails**
- **Flexible ways to upload content**
- **Powerful transformation engine for according metadata**
- **Avoid application downtime through delta scan capabilities**
- **Controlled and regulated migration process**

Test migration-center in your own system landscape with our free fourteen-day trial.

»migration-center is a great product. It had richer features and functionality than the previous ETL tool we were using. It alleviated the need to do any custom scripting for migrations and helped us to comply to our records policies.«

Vincent Yeung, Senior Software Developer @ Canadian Blood Services
