

Successfully migrate to Microsoft SharePoint

Whether it's about replacing content-centric business applications with Microsoft SharePoint, consolidating several systems after a merger, or migrating local SharePoint applications to SharePoint Online – migration processes remain challenging. Secure migration control and high-performance handling must always be ensured – even in case of large-volume data migrations. In addition, end users are confronted with the risk of system interruptions interfering daily business operations.

Microsoft SharePoint Online onboarding

migration-center can quickly help to initially fill new SharePoint applications from old Sharepoint systems or any other sources

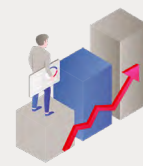

like ECMs, file shares, or legacy databases. migration-center creates lists, folders, migrates documents, versions with metadata, and sets content types system attributes and security on an object basis successfully. With the utilized Microsoft SharePoint Migration API the speed of migrating gigabytes can be between 5 to 10 times faster than before.

Replacement of classic ECM platforms

Replace any existing application with Microsoft SharePoint Online. Simply collect all kinds of documents and metadata from the existing

legacy applications and platforms and move them through the help of the cloud importer to Microsoft SharePoint. Tailor the metadata for SharePoint with easy-to-configure transformation rules and keep the source system up and running by using the delta mechanism in migration-center. The new bulk import interface from Microsoft is supported as well.

Shift & lift Microsoft SharePoint applications

Easily migrate your applications to the cloud. migration-center enables you to migrate specific applications from local

Microsoft SharePoint farms to SharePoint Online (Office365) or OneDrive. You can copy existing applications one by one or change the metadata definitions or security rules. With our solution, you are freed from the complexities of the Microsoft SharePoint Migration API, enabling a smooth and straightforward transition.

Supported source systems

- ✔ File share
- ✔ SQL Database
- ✔ Hyland Alfresco
- ✔ HCL Domino/Notes
- ✔ IBM FileNet IS/CS
